

Net Value Calculator

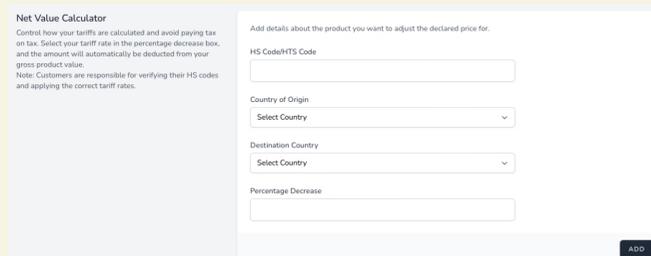

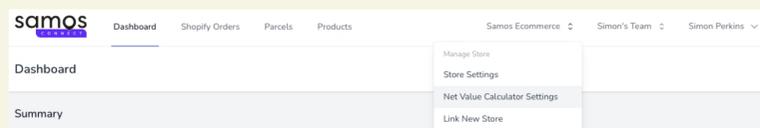

Tired of overpaying on import duties? You're not alone.

That's why SAMOS has designed this simple tool to help you declare your product value accurately on shopping platforms and marketplaces – and avoid paying tax on tax.

The Net Value Calculator allows you to exclude import duties, taxes and tariffs before your shipping declaration is submitted when you create a label with us. It ensures that only the correct net product value is declared.

How it works:

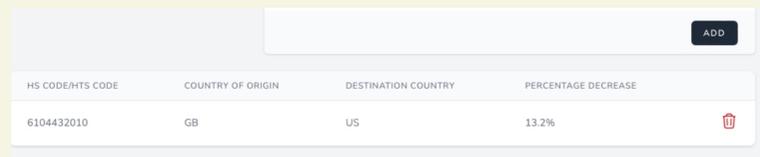

Step 1

Log in to SAMOS Connect. Go to your store name and click on “Net Value Calculator Settings”.

Step 2

Complete the fields for each item including HS Code, country of origin and destination country. Apply the accurate tariff rate in the “Percentage Decrease” box (this will be discounted from your product value). Click on add.

Step 3

The new entry will be added to a list (see below) ready for shipping. In this example, the value that the shop platform or marketplace sends us will be discounted by 13.2%.

That's it! We take over from here and customs declare your parcel based on the net value. Simple.
